Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/730,438

Applicant(s)

SCHNABEL ET AL.

Examiner

Adam Marcetich

Art Unit

3761

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 19 January 2010.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-11 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-11 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SE/US)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 19 January 2010 has been entered.

Claim Interpretation

2. The claims have been amended to remove the language "ornamental" from the previously claimed "ornamental designs." Each claim now calls for "printed designs." The specification provides an enabling description for ornamental designs printed on a polymeric film, nonwoven web or both (p. 10, lines 17-25, especially lines 18-19). Additionally, the specification describes measuring L Hunter values in areas outside ornamental designs that do not comprise a printed area (p. 13, lines 19-26, especially lines 19-21). Therefore Examiner interprets the claimed "printed designs" consistent with designs printed on a polymeric film, nonwoven web or both.

3. Since the claimed LL Hunter values are measured outside of printed designs, these color values are a material property of the backsheet lacking ink. The LL Hunter values therefore derive from the materials forming each of the polymeric film and nonwoven web. The specification provides examples of materials suitable for forming the polymeric film and nonwoven web (p. 7-8, lines 4-15, 16-4).

Art Unit: 3761

4. Additionally, claim 1 calls for opacity between about 55% to 100% in areas outside the printed designs. This property is therefore also a property of the ink-free, unprinted material.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. Claims 1, 3, 4, 10 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schleinz; Robert J. et al. (US 5458590) in view of Costolow; John J. (US (3972854).

8. Regarding claims 1, 10 and 11, Schleinz discloses a disposable article (col. 6, lines 28-39);

9. comprising a liquid pervious topsheet, a liquid impervious backsheet and an absorbent core positioned between said topsheet and said backsheet (col. 6, lines 44-57, Fig. 2, topsheet 22, backsheet 6 and absorbent composite 20);
10. wherein said backsheet comprises at least one polymeric film (col. 6, lines 44-52, Fig. 2, liquid impervious film 14); and
11. at least one nonwoven web formed of fibers (col. 6, lines 44-52, Fig. 2, nonwoven polyolefin fibrous web 8);
12. wherein said polymeric film and said nonwoven web each have two major surfaces (Fig. 2, film 14 and web 8 each having two major surfaces);
13. said polymeric film comprises a polymeric film material (col. 6, lines 44-52, Fig. 2, film 14); and
14. said nonwoven web fibers comprise a polymeric nonwoven web material (col. 7, lines 44-57, fibers of fibrous web);
15. wherein at least one of said polymeric film material or said polymeric nonwoven web material is color-pigmented by one or more pigments mixed therein prior to formation of said polymeric film or said nonwoven web (col. 7, lines 58-64, especially lines 61-64, pigments incorporated into fibers); and
16. wherein at least one of said polymeric film or said nonwoven web has visually discernible printed designs (col. 6, lines 28-39, printed designs);
17. said printed designs being provided by printing a pigmented ink onto at least one of said major surfaces of at least one of said polymeric film or said nonwoven web (col.

7, lines 3-18, especially lines 14-18, printing on nonwoven fibrous web to alleviate need for overlying layer); and

18. said polymeric film being joined in an overlaying region across at least part of one of its major surfaces to at least part of an adjacent major surface of said nonwoven web to form said backsheet 6, lines 44-52, web 8 joined to film 14).

19. Schleinz discloses the invention substantially as claimed, see above.

Additionally, Schleinz forms film 14 and web 8 from the same polyolefins as disclosed in the specification (specification, p. 7, lines 4-15, polyethylenes and polypropylene; Schleinz col. 7, lines 26-32, 40-42). Schleinz analyzes the crockfastness rating or color-retaining ability of a printed substrate and reports CIELAB values (cols. 8-9, lines 62-12, especially lines 2-4). However, the claimed $L^* a^* b^*$ values analyze unprinted material, which is free of ink. Schleinz only analyzes printed samples which include ink, and is silent regarding the $L^* a^* b^*$ values of unprinted material. Therefore Schleinz lacks specific $L^* a^* b^*$ values as claimed [1, 10, 11].

20. Costolow discloses a method of controlling the color of fiber-grade polypropylene (col. 1, lines 3-17, col. 4, lines 15-20, Fig. 1, extruder 34 producing pellets of fiber-grade polypropylene); and

21. analyzes their $L^* a^* b^*$ color values (col. 1, lines 44-51, col. 5, lines 1-14).

22. Costolow analyzes unprinted, ink-free material and returns values overlapping the claimed ranges [1]:

23. an L value for darkness/lightness-appearance from 10 to 75 or 10 to 65 (col. 5, tables for examples I and II having LL values between +52.9 to +56.0);

Art Unit: 3761

24. an "a" value for red/green- appearance from about -50.0 to about +50.0 or about -35.0 to +25.0 (col. 5, tables for examples I and II having a values between -16.0 to -12.6); and

25. a "b" value for yellow/blue- appearance from about -50.0 to about +50.0 or about -35.0 to +25.0 (col. 5, tables for examples I and II having b values between +12.6 to +14.8).

26. Here, Costolow formulates a grade of polypropylene suitable for forming fibers. Each of the specification and Schleinz use polypropylene to form a film and nonwoven web. Additionally, Schleinz calls for printing with bright colors (col. 6, lines 40-44). Polypropylene having the $L^* a^* b^*$ values within the ranges of Costolow provides a bright background for these images. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the invention of Costolow as discussed with the fiber-grade polypropylene of Costolow in order to provide a bright background for printing images as called for by Schleinz.

27. Regarding claim 3, Schleinz discloses an absorbent article wherein one of said two major surfaces of said polymeric film and said nonwoven web is a garment facing surface (col. 6, lines 52-57, Fig. 2, outer visible surface 10); and

28. said discernible printed designs are provided by printing on at least one of said garment facing surfaces of said polymeric film or said nonwoven web (col. 7, lines 3-18, especially lines 14-18, printing on outer surface of nonwoven web).

29. Regarding claim 4, Schleinz discloses an absorbent article wherein said backsheet comprises a garment facing layer and a body facing layer (col. 6, lines 44-52, Fig. 2, backsheet 6 having web 8 and film 14); and

30. said nonwoven web is comprised by said garment facing layer (Fig. 2, web 8);
and

31. said polymeric film is comprised by said body facing layer (Fig. 2, film 14).

32. Regarding claim 7, Schleinz and Costolow disclose the invention as substantially claimed, see above. However, Schleinz and Costolow are silent regarding a distance between a rear end edge and a rear core end edge being about 40 mm as claimed [7]. The property of distance between edges is interpreted as a result-effective variable, subject to experimentation and testing. A result-effective variable is a parameter which achieves a recognized result. These results are obtained by the determination of optimum or workable ranges of said variable through routine experimentation. The property of distance between edges achieves good fit for a baby through routine experimentation. For example, diapers are provided in sizes suitable for fitting infants of different sizes. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to adjust the distance between edges of Schleinz in order to fit infants of an average size. See MPEP 2144.05(II)(A,B). Also see in re Boesch and Slaney, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Art Unit: 3761

33. Claims 2, 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schleinz; Robert J. et al. (US 5458590) in view of Costolow; John J. (US (3972854), further in view of McCormack; Ann Louise et al. (US 6719742).

34. Regarding claim 2, Schleinz and Costolow disclose the invention substantially as claimed, see above. However, Schleinz and Costolow are silent to the specific opacity value of areas outside printed designs as claimed [2]. McCormack discloses a personal care product including diapers (col. 3, lines 17-20); and

35. selects a material for printing that has opacity from about 55% to 100% in areas outside printed designs (col. 9, lines 43-56, especially lines 43-48, Fig. 3, laminate 30 comprising opaque polyolefin polymeric sheet 42). Examiner interprets the "opaque polymeric sheet" of McCormack as having opacity of 100%, since McCormack does not disclose any departure from a maximum opacity and also calls for a material that creates a more distinct patterned fabric (col. 9, lines 50-56). McCormack selects an opaque sheet to enhance printed designs. One would have been motivated to modify Schleinz and Costolow with the 100% opacity of McCormack, since Schleinz calls for bright printed images as discussed for claim 1.

36. Regarding claims 5 and 6, Schleinz and Costolow disclose the invention substantially as claimed, see above. However, Schleinz and Costolow are silent to the specific percentage of the major surfaces covered with printed designs as claimed [5, 6]. The property of covered area percentage is interpreted as a result-effective variable, subject to experimentation and testing. A result-effective variable is a parameter which achieves a recognized result. These results are obtained by the determination of

Art Unit: 3761

optimum or workable ranges of said variable through routine experimentation. The property of covered area percentage achieves masking of waste materials through routine experimentation.

37. For example, McCormack discloses a method of printing an absorbent article with an embossed design to conceal waste materials (col. 7, lines 30-37, "...employing colors that in effect neutralize the colors within the interior of the article..."). In other words, McCormack selects a coverage percentage is based on the ability of concealing waste materials as seen from the outside of an absorbent article. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to adjust the covered area percentage of Schleinz in order to mask a soiled absorbent article. See MPEP 2144.05(II)(A,B). Also see in re Boesch and Slaney, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

38. Claims 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schleinz; Robert J. et al. (US 5458590) in view of Costolow; John J. (US (3972854), further in view of McFarland et al. (US 6096412).

39. Regarding claims 8 and 9, Schleinz and Costolow disclose the article as discussed above for claim 1. However, Schleinz and Costolow lack a half-toning printing process as claimed [8, 9].

40. McFarland discloses a process of printing absorbent articles with a half-toning printing process (col. 1, lines 14-24 and column 17, lines 52-60). Examiner notes that the process of halftone printing necessarily involves printing with an opaque ink (online

encyclopedia, p. 1, paragraph 3), which is covered by dots to produce the effect of an additional color (online encyclopedia, p. 1, ¶ 2).

41. A halftone printing process creates the effect of additional colors for a user (McFarland col. 17, lines 52-60). The practice of printing within an area of a nonwoven web or major surface as claimed falls within the scope of obviousness, as required to print graphics on different areas of a diaper. McFarland provides the advantage of enhanced resolution, in addition to reducing the number of differently colored inks to create the impression of multiple colors (col. 18, lines 55-67, especially lines 55-58).
42. Schleinz calls for printing multiple techniques including flexography (cols. 3-4, lines 65-5), rotogravure printing (col. 4, lines 51-57) and multiple-color inkjet printing (col. 4, lines 58-65). Here, Schleinz suggests a need for multiple colors, provided by halftone printing. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the invention of Schleinz and Costolow as discussed with the half-toning process as taught by McFarland in order to enhance graphic resolution and use fewer inks.

Response to Arguments

43. Applicant's arguments filed 19 January 2010 with respect to the rejection(s) of claim(s) 1-11 under 35 USC § 103 over Schleinz, Burazin, McCormack and McFarland have been fully considered and are persuasive. Therefore, the rejection is withdrawn. However, upon further consideration, a new ground(s) of rejection is made under 35 USC § 103 over Schleinz, Costolow, McCormack and McFarland.

Art Unit: 3761

44. Applicant contends that Schleinz and Burazin lack a composite backsheet having printed designs, with areas outside printed designs having the claimed Hunter values. Applicant notes that Schleinz addresses inks and inks crockfastness but is silent concerning the substrate coloration in areas outside printing. Applicant finds that Burazin fails to remedy this deficiency, since Burazin lacks HunterLab values for areas outside printed patterns and instead only mentions that it is "typically white." Examiner cites Costolow as teaching $L^* a^* b^*$ values overlapping the claimed ranges in the new grounds of rejection.

Conclusion

45. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
